

We implemented features 1, 2, 3, 5, 6, 7, 8, 11, 15.

The license that we picked was GPL v3. This is because we wanted the project to be open sourced and were happy to have others use it in any way that it could help them. Using the GPL v3 license also ensures that no user of our product adds more restrictions to the license, which means that our code will be able to stay available.
